THE ROLE:

- *The Software Developer will be working closely with our Design team to architect, design, develop, and deploy lightweight iOS and/or Android apps.*

WHAT YOU WILL DO:

- *Development of iOS and macOS (Native);*

- *Generate validate ideas (brainstorming, market research, mind mapping, concept testing, requirement gathering strategy development);*
- *UX/UI Design (information architecture, wire framing, style guides, prototyping, mock-ups);*
- *Development (native/cross-platform/Hybrid, Backend development, product builds, testing QA feedback, reactions);*

- *Testing QA (test case preparation, manual automated testing, functional testing, usability testing, performance testing);*
- *Launch deployment (finalize build; App Store submission, analytics setup, App Store approval, backend deployment);*
- *Marketing maintenance (app marketing strategy, App Store optimization, user engagement retention, continuous monitoring, releasing updates and fixes);*
- *Work with the Front-End team and Designers to bring the desired application UI/UX to life;*
- *Integrate Push Notifications;*
- *Generate user documentation for the applications developed;*
- *Engage with other team members to hand off knowledge of the developed applications and facilitate others to maintain and modify the application;*
- *Triaging and fixing bugs during initial mobile app development and deployment.*

WHAT WE OFFER:

- *We are a well-rounded team that believes that great ideas can come from anywhere whether it be in a conference room or written on a napkin at the bar! You have here an excellent opportunity to join a growing company with a competitive salary and benefits (including travel package) and develop a career in a truly unparalleled environment. We are focused on the future, we think globally, and we value our people.*
